Likelihood Level	Description of Likelihood / Probability	Risk Class / Ranking	Requirements
Likely	Could happen frequently	1	STOP proceed after detailed planning has occurred and controls implemented
Moderate	Could happen occasionally	2	PROCEED with stated controls
Unlikely	May occur only in exceptional circumstances	3	PROCEED and monitor

Consequence Level	Description of Consequence or Impact	Likely	Moderate	Unlikely
<b>H</b> (High level of harm)	Potential death, permanent disability or major structural failure / damage. Long term or serious environmental harm and / or some impact on operations.	<b>1</b>	<b>1</b>	<b>2</b>
<b>M</b> (Medium level of harm)	Potential temporary disability requiring medical intervention or minor structural failure / damage. Moderate environmental harm and / or some impact on operation.	<b>1</b>	<b>2</b>	<b>3</b>
<b>L</b> (Low level of harm)	Incident that has the potential to cause persons to require first aid. Little or no environmental harm and / or impact on operations.	<b>2</b>	<b>3</b>	<b>3</b>

The "Hierarchy of Control" is used for determining appropriate control measures for eliminating or minimising hazards and risks when developing safe work methods. Users must start at the top of the hierarchy and select control measures from the highest order possible, or use a combination of measures to appropriately manage exposure to a risk.

Hierarchy of Controls	Examples of Controls
<b>(i) Elimination – Remove the hazard completely</b>	<ul style="list-style-type: none"> <li>• Design change, change of construction methodology</li> </ul>
<b>(ii) Substitution</b>	<ul style="list-style-type: none"> <li>• Use safer substance / chemical</li> <li>• Environmental catchments / sedimentations pools</li> </ul>
<b>(iii) Isolation – Separate people from the hazard</b>	<ul style="list-style-type: none"> <li>• Guards on power tools</li> <li>• Use effective screens, barriers and edge protection</li> <li>• Enclose noisy machinery</li> <li>• Environmental swales, booms or barriers, paint washout station</li> </ul>
<b>(iv) Engineering</b>	<ul style="list-style-type: none"> <li>• Use an Earth Leakage Device (safety switch) on electrical sources</li> <li>• Use a machine to lift heavy objects, use scaffold rather than a ladder as a working platform</li> </ul>
<b>(v) Administration</b>	<ul style="list-style-type: none"> <li>• Change Work Practices and safe work method procedures</li> <li>• Tagging and testing procedures</li> </ul>
<b>(vi) PPE</b>	<ul style="list-style-type: none"> <li>• Hard hats, glasses, hearing protection, hi-visibility vests, safety boots / shoes</li> <li>• (Note: PPE should be the last option to protect people)</li> </ul>
